Alfonso,

Here is another option. Looks like I calculated total abundances with just transects across our sites 2009-2011 (2012) for another collaboration. Species are all in one column. Can you use it? Looks like I did not use Cornell02 in 2009 for this data set - there must have been a reason. Please see "abundance data" worksheet. I also include estimated floral abundance on trees for 2011 and 2012 here.

Best,

Mia
